VELCRO ROLLER CONSTRUCTION

Building and constructive play is great for practicing problem solving and creativity. Think outside of the box and explore building with other fun items like paper cups, bowls, or these velcro hair rollers.

MATERIALS
● Various size of velcro rollers

HOW TO PLAY
Build shapes, structures, or towers by stacking them on top of one another. Sort them by size and color. Stack them within one another. Try combining them with other building materials to create fun new sculptures.

Safety tip: Always supervise your child as they play with these items. Don’t let children chew on or put items in their mouths.

LET’S TALK ABOUT IT!
● Describe the materials and ask open-ended questions. “What do you think these are used for?” “What could we build with these?”
